Summary

Software Engineering undergraduate at NUST with experience in Artificial Intelligence applications, Computer Vision, Linux systems, and software development. Skilled in Python, C++, OpenCV, and intelligent system development through internships and projects involving facial recognition, multimedia streaming, and phishing detection.

Education

Bachelor of Engineering in Software Engineering

Military College of Signals (National University of Sciences and Technology)

2024 – Present

Islamabad, Pakistan

– Current CGPA: 3.74 / 4.00 (after 4 semesters)

Technical Skills

- **Programming:** Python, C++, Java, JavaScript
- **AI & Computer Vision:** OpenCV, OCR, Facial Recognition, Intelligent Systems
- **Core CS:** Data Structures, Algorithms, OOP, Operating Systems
- **Tools:** Git, GitHub, Linux, Ubuntu, SQL, VMware
- **Technologies:** Flutter, HTML, CSS, GStreamer, V4L2

Experience

Software Engineering Intern

Laser & Electro Optical Solutions (LEOS), NASTP Alpha Square

Jun 2025 – Aug 2025

Rawalpindi, Pakistan

- Developed an AI-powered attendance and surveillance system using Python, OpenCV, and facial recognition techniques for real-time identification and automated attendance logging.
- Built cross-device multimedia streaming pipelines using GStreamer and Video4Linux (V4L2) on Ubuntu Linux for real-time video transmission and monitoring.
- Configured Linux-based development environments and supported multimedia processing workflows using virtualization and command-line tools.

Projects

Exam Branch Automation System

- Developed a web-based examination management system for the MCS, (NUST) to automate examination planning and administrative workflows.
- Implemented modules for datesheet generation, classroom allocation, invigilator assignment, supervision board management, and report generation.

PhishSentry AI — AI-Powered Phishing Detection System

[Live Demo](#)

- Developed an AI-powered cybersecurity application that detects phishing attempts from text and screenshots.
- Integrated OCR-based text extraction and LLM-powered risk analysis to identify suspicious links, language patterns, and social engineering indicators.
- Deployed the solution using Gradio to provide real-time phishing analysis and risk assessment.

Multi-Camera AI Surveillance & Attendance System

- Built a real-time facial recognition and attendance system supporting multiple camera feeds simultaneously.
- Developed attendance logging with duplicate-entry prevention and timestamp-based tracking.
- Integrated a Flutter-based interface for monitoring camera feeds and attendance records.

Certifications

- National AI Training Bootcamp — Ministry of IT & Telecom Pakistan
- Generative AI Application Developer — ULEFUSA
- Prompt Engineering for Generative AI — Vanderbilt University
- Data Structures and Algorithms — Microsoft
- Deep Learning Workshop — Pakistan Engineering Council (PEC)
